

Congratulations on the purchase of your Snoot Set for VB-Series Bare-Bulb Flashes. This effects kit includes two snoots with built-in 40° grids designed to create stylized and dramatic lighting effects. The tube snoot is designed to create a spotlight effect with moderate spill. The cone snoot creates a tighter pinpoint lighting effect with rapid falloff.

To install a snoot, please follow these steps:

With all other accessories removed from your bare-bulb flash device, slide the light-focusing accessory over the bulb into the unit.

Make sure to properly tighten the bare-bulb flash's accessory port to secure the snoot.
